Important Information and footnotes

- 1** The product summary gives a
- 2** The date at which the investment starts to be evaluated.
- 3** The current indicative maturity value shows the indicative return if the level(s) of the underlying reference(s) to which the performance is linked, remain(s) unchanged until maturity. It is more than likely that the actual maturity value will turn out to be different to the current indicative maturity value at the end of the investment period because the level(s) of the underlying reference(s) change(s) continuously. Depositors and investors should therefore be aware that their returns can go down as well as up and are likely to fluctuate during the investment term.
The current indicative maturity value is unlikely to equal the current market value. Deposits are not tradable and can only be broken in exceptional circumstances and at Standard Bank's discretion. While structured notes are tradable (subject to a market price being available), you should be prepared to commit your capital invested for the full product term to avoid being impacted negatively by fees.
- 4** Shows the minimum value that the product is designed to return at maturity. The capital protection, as well as the potential return, are dependent upon the issuer being able to meet its financial obligations.
